

Apostol Gabriel

Senior Frontend Engineer · React & TypeScript · Argeş (near Piteşti) · Remote-first

0761030884 apostol.gabriel90@gmail.com LinkedIn GitHub

Senior frontend engineer with 7+ years building React and TypeScript applications. Most recently I built a banking widget for ING and worked on real-time products. I've often been the only frontend on the team, working day to day with backend, DevOps, QA and business analysts, and occasionally worked directly with the client's teams. My core stack is React, TypeScript, Vue, Vite, Redux Toolkit and Azure DevOps, and I also work across the integration side, like connecting UIs to microservices and handling live data with WebSockets. I actively use AI-assisted development with Cursor and Claude for planning, implementation, debugging, and faster iteration.

Based in Argeş, near Piteşti. Primarily seeking remote roles in Romania and across Europe, and open to relocating to Bucharest or Braşov for hybrid.

Work Experience

2024/04 - 2026/01 Senior Frontend Developer at Cegeka

Sole frontend developer on a banking widget for ING, within a 12-person cross-functional squad.

- Sole frontend developer in a 12-person squad spanning backend, DevOps, and QA — owned the React + TypeScript widget delivered for ING.
- Represented frontend in corporate meetings with business stakeholders throughout analysis, delivery, and release.
- Built and shipped the widget with Vite and Redux Toolkit, using Azure DevOps (Boards for task tracking, Pipelines for CI/CD); integrated with backend services and partner teams from associated vendors.
- Built a separate marketing landing page in Next.js to promote the product's features, using server-side rendering so the page was indexable by search engines, with automatic code-splitting, optimized and lazy-loaded images via next/image, and pre-rendered HTML for a fast first contentful paint and strong Lighthouse scores.
- Collaborated with testing and DevOps to maintain continuous integration and deployment in an Agile workflow.

Between jobs ————— Freelance Frontend Developer

Freelance and personal product work across web, commerce, mobile, and AI-assisted delivery.

- Built and iterated on Next.js websites, Shopify storefront work, and Android app features/prototypes.
- Sold and made personal projects with AI support, using Cursor and Claude to turn product ideas into architecture, UI flows, implementation tasks, and working code.
- Used AI-assisted development for research, scaffolding, debugging, refactoring, and code review while keeping ownership of technical decisions and final implementation quality.

2023/03 - 2024/03 ————— Senior Front-End Software Engineer at Whitestone Software

Senior engineer on an 8-person frontend team across two integrated React + TypeScript applications.

- Worked on two concurrent React + TypeScript apps — a player-facing interface and a game engine layer — within an 8-person frontend team on a large-scale product.
- Designed integration so the game engine consumed state and events from the interface layer in real time.
- Connected the frontend to backend microservices via REST and WebSockets for live data and game updates.
- Built a separate promotional and news site for the game in Next.js (SSG + ISR), pre-rendering pages at build time and revalidating on a schedule so patch notes and marketing content updated without redeploy — serving cached static HTML for near-instant page loads and strong Core Web Vitals while staying SEO-friendly.
- Contributed to application architecture, core feature development, and team tooling (Webpack/Vite, Redux, Jira, Agile).

2021/06 - 2023/03 ————— Front-End Software Engineer at Arnia Software

Built client-facing Vue applications with configurable UI and close stakeholder collaboration.

- Delivered component-based Vue applications with front-end state management (Pinia) and Azure-hosted backends.
- Worked directly with clients to refine features, prioritize user stories, and adapt technical scope to business needs.
- Implemented end-user product customization through a graphical configuration interface.

2019/06 - 2021/04

Javascript Software Engineer at Advahoo

Frontend-focused engineer on complex React SPAs for desktop and mobile.

- Built and maintained React single-page applications for PC and mobile in an Agile team.
- Contributed to application architecture for modularity, performance, and adaptability to client requirements.
- Supported UI/UX decisions and occasionally assisted with backend and client-side testing.

2018/11 - 2019/01

Java Developer — Internship at UniCredit Services

Internship on a client-facing banking project with frontend and Java API work.

- Implemented frontend features and UI/UX for a dedicated client group in the financial services sector.
- Built Java backend APIs aligned with business logic requirements.
